

## Home Work Monday 30 October

**you do not have to hand this in (yet)**

- Create a personal website with at least three pages
- One of those pages has to contain an image gallery created with float and with a paragraph that is cleared
- All the pages should contain a nav bar

hints:

Do not use other display values than the ones we have discussed during class. Those are: -block -inline -inline-block

Do not use float and display on the same html-element, because they interfere with each other
